Company/Client branding logo and colours

Branding & Customisation · https://paiyroll.com/kb/company-client-branding-logo-and-colours/

Follow this guide to update the logo and colours for **companies** and your **client**.

Overview

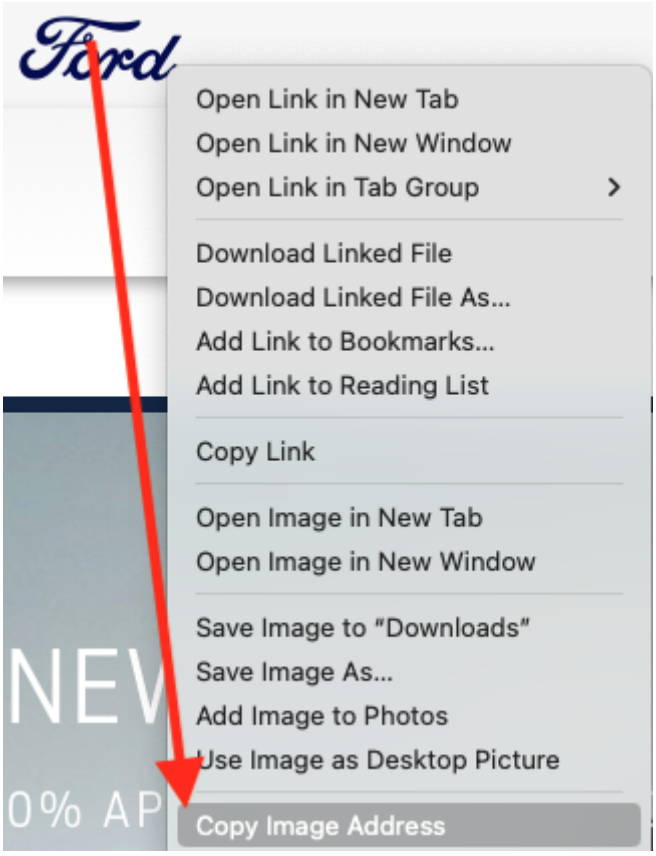
Company branding is visible to the company's employees on their **Mobile** app screens. If you have multiple companies, you can use different branding for each company. This company Logo will also appear on the Payslips.

Client branding is separate and only affects **administrators** when they view the **Admin** screens.

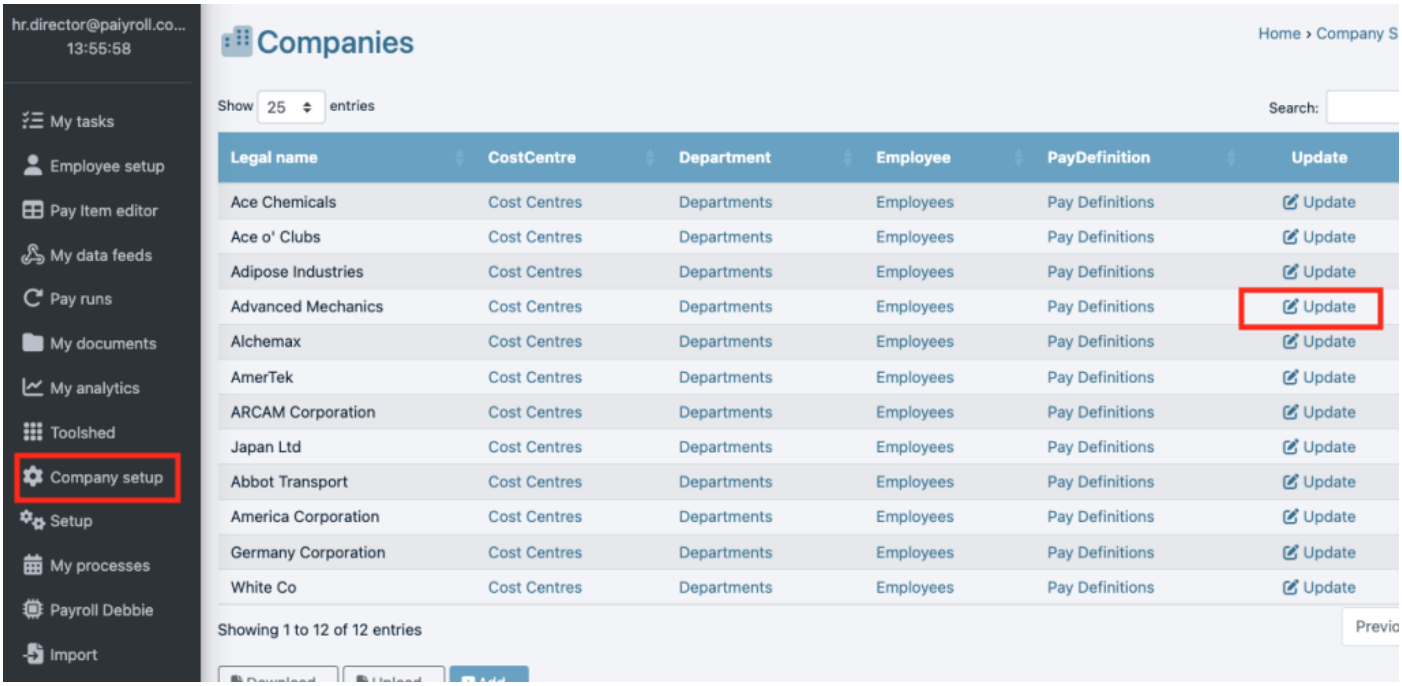
Company branding

Logo

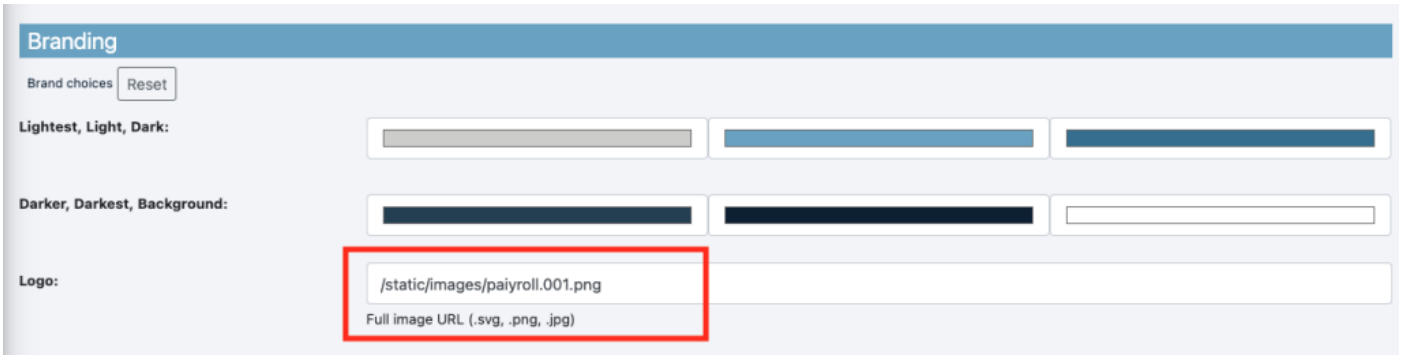
First, you will need a **Logo** image URL from the company website. Navigate to the company website and find the logo you wish to use. if you place your mouse over your company logo and **right-click**, you should get an option to **Copy Image address.** If you are unsure you may need to check with your website manager.



Company Setup > **Update** the relevant company:



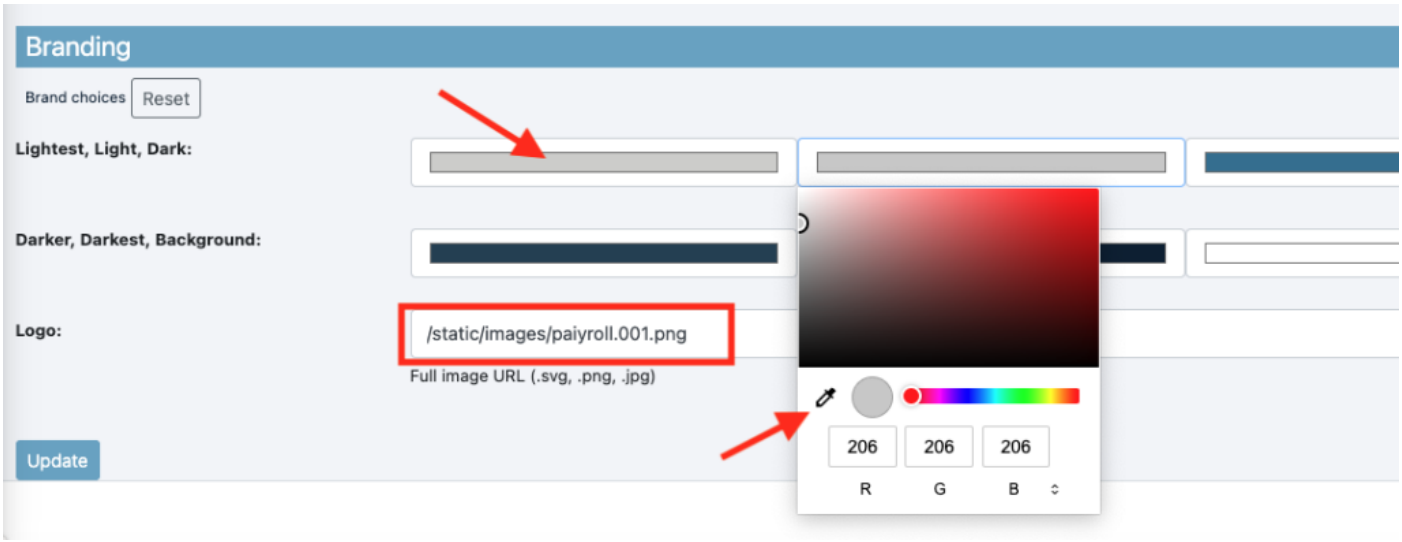
Scroll to the bottom of the Company page, then **Paste** this URL copied above:



Colours

The easiest way is to open your company website in another browser window and navigate to a page with your colours. Then use the colour picker to pick the colours directly from your website

Alternatively, you can enter the **RGB**, **HSL** or **Hex** codes if you know them:



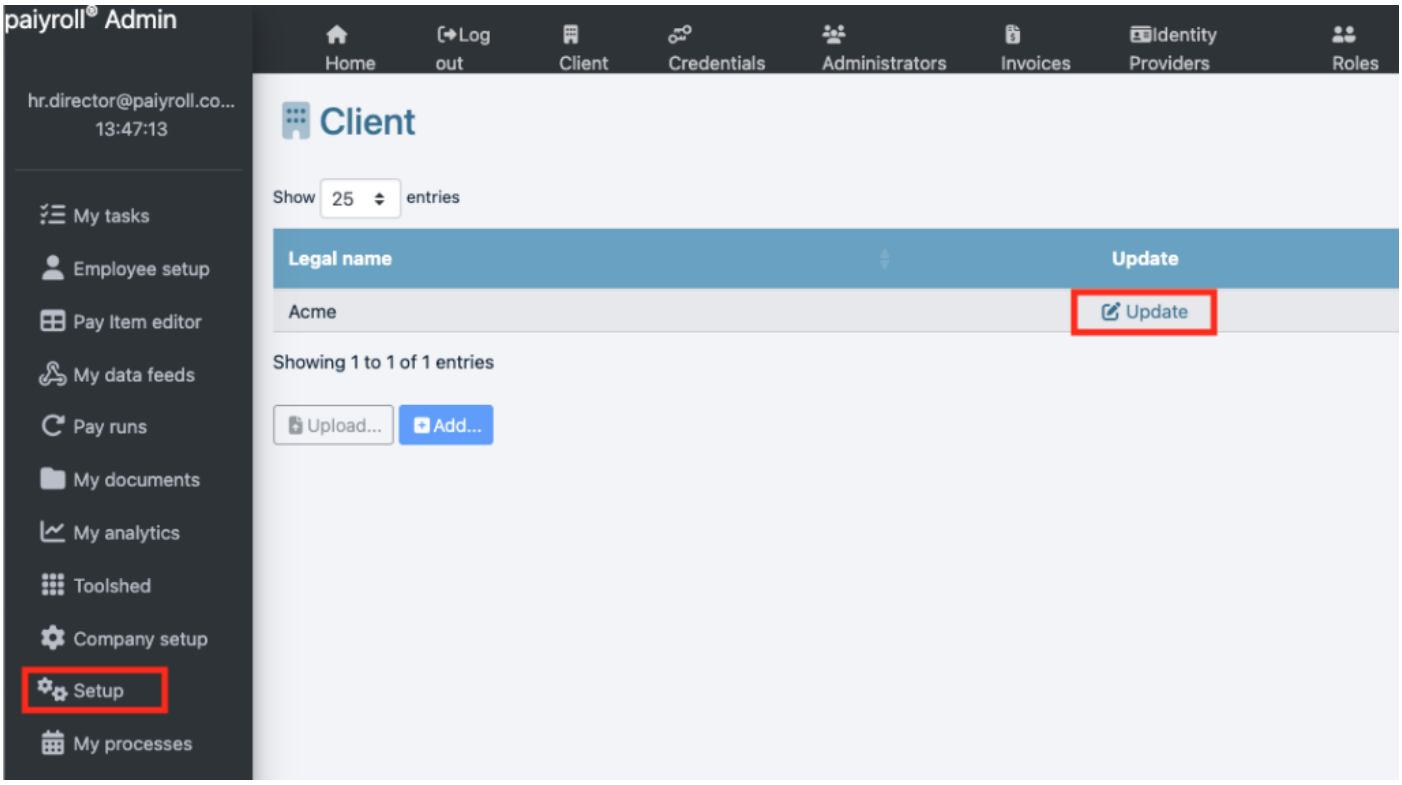
Click **Update** to make the changes to the company.

After making any **company** change, employees will need to log out and log in again to have the change take effect.

Repeat the steps for any other company, or the section below for bulk updates.

Client and white-label branding

If you want to change the branding for Administrators, click **Setup** and **Update** the client:



Follow the same steps as above to set the **Logo** and **Colors** for the client.

Note: After making any **client** change, you will need to log out and log in again to have the change take effect.

Bulk Company branding using Download/Upload

If you have multiple companies to update, you may find it easier to **Download**... the companies as a CSV. Then edit each company row in a spreadsheet and **Upload...** You will need to know the logo image URL colour codes to use this approach.
