Page not configured

General · https://paiyroll.com/kb/page-not-configured/

Cause

This error occurs if you try to access a page you are not permitted to see using a bookmarked URL.

For example, payroll is being prepared, and the administrator has temporarily hidden live payslips.

Resolution

We recommend using only the regular buttons in the app, which appear only when access is allowed.

Contact your Payroll administrator to find out why that function isn't available.

Administrators

When Hide live payslips is turned on, the Live Paylips button will not show, and the latest payslip will not be visible. Employees will get the **page not configured** error for any bookmarked URL.
